

ASIAN LMS LOAD MONITORING SYSTEM

Your Concern

- Incoming Voltage from the utility and electricity companies vary from time to time
- Voltage drops during the peak hours and shoot up during night hours
- All the gas discharge lamps to ignite and operate correctly, should be fed with a voltage varys of the nominal voltage

Our Solution

- Asian Load Monitoring System
- It allows a controlled operation of the lamp through advance microprocessor technology
- It maintains the input voltage wave form without inducing any noise and harmonics
- Each unit is equipped with a voltage monitor to protect the lamp from operating at too low or too high voltage

Special features

- Easy to install
- Saves energy upto 35%
- Corrects voltage to start the lamp @ voltage specified by the lamp manufacturer
- Prolongs lamp life
- All functions are auto controlled with microprocessor
- No modification required in the present fittings or lighting system
- Out put switched off if line voltage goes above or below safe level of operation
- Manual operation is possible for maintenance work
- works in ambient of 55° C
- Optional remote controlled feature

Various Models are available in single phase and three phase. Model can be suggested by our authorised representative after evaluating the load requirements of your installation.
